

# Consistent, compliant email signatures for healthcare providers

Email signature management made easy for healthcare IT

Healthcare organizations rely on email to communicate with patients, coordinate care, and meet regulatory obligations. But when email signatures are managed manually, they're often inconsistent, outdated, or missing critical details.

Exclaimer gives IT teams centralized control, ensuring every email reflects your brand, meets compliance requirements, and builds patient trust.

## The signature challenges for healthcare IT

Managing email signatures across multiple facilities, departments, and mobile staff is harder than it should be.

### Common challenges include:

- **Inconsistent formatting across hospitals, clinics, and departments**
- **Missing email disclaimers to meet data protection laws like HIPAA, GDPR, and HITECH**
- **Outdated staff titles, credentials, or contact details**
- **No audit trail for legal or compliance teams**
- **Signature updates require IT intervention, increasing helpdesk tickets**
- **Higher phishing risk due to inconsistent, spoofed, or missing sender details**

When email signatures aren't managed centrally, even routine communications can put patient trust and compliance at risk.

# Exclaimer for healthcare organizations

Consistent. Compliant. Controlled.

## Key features & benefits:

- **Centralized control across hospitals, clinics, and remote teams** – No manual installs or device reconfigurations required.
- **Automated compliance enforcement** – Apply email disclaimers by region, department, or user type. Supports HIPAA, GDPR, CCPA, and more.
- **Directory sync with Microsoft 365 and Google Workspace** – Auto-populate credentials, roles, and contact details.
- **Audit-ready tracking** – Maintain version history for updates, approvals, and reviews.
- **Consistent branding across all devices** – Standardize formatting, logos, and sender identity—even on mobile.
- **Reduced IT workload** – Push updates in minutes, without manual edits or scripts.
- **Delegated control with RBAC** – Let other departments update messaging, while IT stays in control.

## Four steps to full control

### 1. Launch your account

Get started quickly with optional onboarding.

### 2. Create your templates

Use drag-and-drop or prebuilt layouts tailored to healthcare roles.

### 3. Set rules and apply logic

Target by clinic, location, department, or job title.

### 4. Delegate with confidence

Use Role-Based Access Controls (RBAC) to share access securely.

# Trusted by healthcare providers worldwide

Exclaimer supports over 70,000 organizations and delivers more than 20 billion email signatures each year—including some of the world's leading healthcare providers.

“Exclaimer drastically reduced the time spent on managing email signatures, freeing our team to focus on larger projects. Their platform transformed the way we approach email signatures. It's been a game-changer for efficiency and productivity.”

— Nick Sloka, EMS Healthcare
