

Workday Integration

Accurate employee data across email signatures and video meetings.

Connect Workday to Exclaimer to automatically apply accurate employee data to email signatures and video meeting themes. Use the system you already rely on to keep names, job titles, and contact details current, without adding more work for IT.

What is Exclaimer's Workday integration?

This integration lets Exclaimer pull employee attributes straight from Workday. Instead of relying on directory-only data or manual uploads, you can use your HR system as the source for signature and meeting theme details.

Changes in Workday like new hires, title corrections, and contact updates sync to Exclaimer automatically, so every signature and meeting theme reflects the latest information.

Why it matters

Workday is your source of truth for employee data. When email signatures rely on directory data instead, IT can end up managing HR-owned fields without meaning to. That often leads to manual syncs, mismatched attributes, and cleanup whenever someone joins, changes roles, or moves location.

Exclaimer's Workday integration fixes that. It pulls HR-owned data from Workday and applies it in Exclaimer, where IT maintains governance. You control what fields are used, where they show up, and who gets what, without editing the directory or chasing one-off fixes. Email signatures and meeting themes stay accurate by default, without ongoing admin or workaround-driven processes.

The challenge	How Workday integration solves it
Employee data lives in the HRIS, not in directories	Source employee data from Workday
Manual CSV uploads and fragile sync processes create inconsistencies	Automated data flow from Workday into Exclaimer
Outdated job titles and contact details	Updates apply automatically as employee data changes
Extra admin and support tickets for IT	Updates apply automatically as employee data changes
Directory maintenance for HR-owned attributes	Keep HR as the data owner while IT governs the platform

How it works

- 1 Create a Workday integration user**
 Your Workday admin sets up an Integration System User (ISU) in Workday and assigns the required permissions.
- 2 Connect Workday in Exclaimer**
 Add Workday as an employee data source in your Exclaimer subscription, then authenticate the connection.
- 3 Apply Workday data to signatures and meeting themes**
 Build email signature and meeting theme templates using mapped Workday attributes.
- 4 Stay up to date automatically**
 When employee records change in Workday, updates sync into Exclaimer automatically, so signatures and meeting themes reflect the latest details.
