

UKG Ready integration

Accurate employee data across email signatures and video meetings.

Exclaimer's UKG Ready integration lets organizations automate HR-owned data across email signatures and video meeting themes. Connect the directory your team already uses to keep names, job titles, and contact details current for every employee from day one, without adding more work for IT.

What is Exclaimer's UKG Ready integration?

The UKG Ready integration lets Exclaimer pull employee attributes directly from UKG Ready. Instead of relying on Entra ID, Google Directory, or manual workarounds that don't scale, you can use your HRIS as the preferred directory source for email signature and meeting theme details.

Any changes made in UKG Ready, including new hires, title corrections, and contact updates, sync to Exclaimer automatically. Every email signature and meeting theme reflects current information for all employees, without anyone having to chase it.

Why it matters

UKG Ready is your source of truth for employee data. When email signatures pull from a separate directory instead, IT often ends up managing HR-owned fields. That leads to manual syncs, mismatched attributes, and cleanup work every time someone joins, changes roles, or moves location.

The UKG Ready integration removes that friction. HR data flows from UKG Ready into Exclaimer, where IT maintains governance. You control which fields are used, where they appear, and who gets what, without updating multiple directories or handling one-off fixes.

The challenge vs. how it's solved

The challenge	How UKG Ready integration solves it
Employee data lives in the HRIS, not in directories	Source employee attributes directly from UKG Ready
Manual CSV uploads and fragile sync processes create inconsistencies	Data flows automatically from UKG Ready into Exclaimer
Outdated job titles and contact details	Updates apply as soon as employee data changes in UKG Ready
Extra admin and support tickets for IT	Fewer manual fixes and less cleanup work
IT ends up managing HR-owned attributes	HR stays the data owner; IT governs the platform

How it works

- 1 Connect UKG Ready in Exclaimer:**
 Add UKG Ready as an employee data source in your Exclaimer subscription and authenticate using your UKG Ready domain name, company short name, and API key.
- 2 Grant permissions:**
 Allow read-only access and choose which data fields are shared. Exclaimer handles the rest via BindBee.
- 3 Apply UKG Ready data to signatures and meeting themes:**
 Build email signature and meeting theme templates using your mapped UKG Ready attributes.
- 4 Stay up to date automatically:**
 When employee records change in UKG Ready, updates sync into Exclaimer automatically. Email signatures and meeting themes always reflect the latest details.

Need help with setup?

Book a call with an Exclaimer solutions engineer. We'll walk through the configuration with your UKG Ready admin and answer any questions along the way.

Why Exclaimer

Exclaimer integrates with Entra ID (Azure AD), Google Workspace Directory, and a growing suite of HRIS platforms. Connect email signatures and meeting themes to the systems you already rely on, without giving up governance.

Trusted by

75,000+

companies worldwide.

Exclaimer delivers over

20 billion

billion email signatures every year.

We help organizations keep communications **consistent, compliant,** and **under control**—using the data source they rely on.
